DETAILED ACTION***Priority***

Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence(s) of the specification or in an application data sheet by identifying the prior application by application number (37 CFR 1.78(a)(2) and (a)(5)). If the prior application is a non-provisional application, the specific reference must also include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 18-67 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 6,633,976 B1 [Stevens]. Although the conflicting claims are not identical, they are not patentably distinct from each other because applicant's invention comprises embodiments that implement the same

Art Unit: 2115

steps as the method taught by Stevens. In particular, it is noted that applicant recites a computer program product for processing BIOS modules, a system for processing BIOS modules, and a method for processing BIOS modules. It would have been obvious to one of ordinary skill in the art to implement the method of Stevens in any number of possible embodiments, including a computer program product, a computer system, a process, or a method.

Claims 18-30 and 31-43 of the present application correspond to claims 1-13, respectively, of Stevens.

Claims 44-45 and 56-57 of the present application correspond to claims 14-15, respectively, of Stevens.

Claims 46 and 58 of the present application correspond to claim 4 of Stevens.

Claims 47-54 and 59-66 of the present application correspond to claims 5-12 and 16 of Stevens.

Claims 55 and 67 of present application correspond to claim 17 of Stevens.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cheston et al., U.S. Patent No. 6,725,178 B2, teaches the use of hidden partitions on a storage device for storing BIOS modules.

Frank, Jr. et al., U.S. Patent No. 6,546,489 B1, discloses a disk drive that allows for booting of a computer system from a protected area of the drive.

Bealkowski et al., U.S. Patent No. 5,355,489, discloses an apparatus for loading a BIOS module from a direct access storage device. A first portion of the BIOS is loaded from a ROM, which executes a master boot record to load the remainder of the BIOS of the storage device.

Dewa et al., U.S. Patent No. 5,522,076, discloses a method for re-writing a BIOS-ROM.
